Here is a content development plan for Level One Maths of the Cameroon Primary School Curriculum (English Sub-system, Classes 1 & 2) based on the official curriculum document.

---

1. General information

Level: **Level One** (Classes 1 & 2)
Subject: Mathematics
Time allocation: According to the document, Mathematics for Level 1 is allocated around 69 hours per year in the double-shift system.
Purpose: To develop in the learners the basic mathematical knowledge, skills and attitudes that they can apply in real-life situations.
Approach: Use of concrete materials, real objects, games, cooperative learning, drilling and contextualization.

---

2. Main content strands and units

According to the syllabus table for Mathematics for Level 1, the main components are:
Sets and Logic
Numbers and Operations
Measurement and Size
Geometry and Space
Graphs and Statistics
Below is how you might develop each strand with units, expected learning, and suggested methodology/didactic materials.

Strand	Units / Contents	Expected Learning Outcomes	Suggested Methodology & Materials
Sets and Logic	Objects, Sets, Attributes, Venn diagrams, arranging belongings	Learner can identify sets of objects, classify objects by two or more attributes, arrange belongings in an attractive & neat manner.	Use real objects (pebbles, sticks, blocks), matching games, role-play, visuals (charts, pictures).
Numbers & Operations	Numbers 0-100; symbols & quantities; the four operations; place value (tens & units)	Learner can count, read and write numbers in figures and words up to 100; understand tens & units; perform simple addition & subtraction;	Use number cards, real objects for counting, abacus, role-play, pair work, drilling.

Strand	Units / Contents	Expected Learning Outcomes	Suggested Methodology & Materials
		relate numbers to quantities.	
Measurement & Size	Calendar (days, months), time of day, length/width/height, capacity, money up to 100 F (or 200 F)	Learner can identify days of week, months; estimate and compare lengths/widths/heights; manage coins/currency up to specified units; relate events to times.	Use rulers, clocks, calendars, play-money, “shop” role-play, measurement tasks.
Geometry & Space	Patterns with 2D shapes (triangles, rectangles, squares, circles), curves & lines; locating points on number line up to 20	Learner can recognise and manipulate 2D shapes, complete patterns, construct shapes, differentiate curves/lines; locate points on a number-line up to 20.	Use shape cards, geo-boards, cardboard cut-outs, number lines, games.
Graphs and Statistics	Data, tallying, ranking, ascending/descending order, simple graphs	Learner can represent small sets of data using tallying, arrange numbers in order, present data orally/graphically; show interest in keeping belongings orderly.	Use charts, real objects (e.g., class favourite fruit), tally games, simple bar charts with pictures.

---

3. Sample Termly/Monthly Breakdown

You might divide the year into terms (or months) and allocate content accordingly. For instance:

Term 1: Sets & Logic; basic Numbers & Operations up to 50.

Term 2: Numbers & Operations continued (up to 100); Measurement & Size (days/weeks/months, length/width).

Term 3: Geometry & Space; Graphs & Statistics; Review & integration of all strands

Within each term, you can set monthly themes aligned to the integrated learning themes (ILT) of the curriculum (e.g., Home, The Village/Town, School) so mathematics tasks link to real life.

---

4. Sample Weekly Lesson Planning Template

Here is a simple weekly planning template you can adapt:

Week X

Strand: e.g., Numbers & Operations

Unit: Counting 0-100, reading/writing numbers

Learning Outcomes: By end of week learners will count 0-100, recognise number symbol and word, write numbers up to 100.

Learning Activities:

Warm-up: counting songs or games.

Main: use number cards, group learners to arrange numbers, peer pairing to read numbers.

Practical: each learner writes numbers 0-100 in words & figures, uses real objects to show quantities.

Application: "Number hunt" around the classroom – find and write number cards.

Assessment: oral count by 2s or 5s; write selected numbers; peer-review.

Materials: number cards, real objects (beans, sticks), chalkboard, worksheets.

Remediation: for learners still struggling, do paired counting with tutor; extra practise with ten-frames.

Extension: challenge learners to count backwards from 100; skip-count by 10s.

---

5. Assessment and Remediation

Use both **oral** and **written** assessments, and **practical** tasks (manipulatives) since the document emphasizes a combination.

Maintain a **check-list** for gradual records of learner progress (in line with Class Broadsheet) and do remediation where needed.

At monthly culmination: present a small project or display (e.g., class data tally for favourite games) to integrate with the ILT.

---

6. Inclusion & Differentiation Tips

Since you have experience with inclusive education (from your internship), you should:

Provide manipulatives and visual aids for learners who need concrete experience (e.g., counting objects).

Use peer-grouping: stronger learners help weaker ones in cooperative learning tasks.

Vary pace: some learners may move faster—provide extension tasks (e.g., skip counting, higher numbers) while others consolidate earlier outcomes.

Contextualize learning in learners' environment: e.g., counting local objects, measuring familiar items at home/school, making graphs about classroom things.

Use clear language and repeat instructions; use national/local language where helpful for understanding.

7. Integration with Real-Life / Cross-Curricular Links

Link the "Measurement & Size" lesson with **Social Studies**: measuring the classroom or school yard.
Use **vocational studies** or arts/crafts: e.g., constructing shapes with sticks or beads while learning Geometry & Space.
Use **ICT tools** where available: number-games on tablets or drawing graphs on boards.
Use **integrated learning themes**: e.g., when the theme is "The Home" you might count items at home, compare capacities of containers, sketch floor-plans with shapes.

---

8. Sample Learning Outcome Statement

By the end of Level One, for Mathematics you might expect that learners will:
Recognise, read and write numbers up to at least 100;
Count in ascending and descending order, group objects and classify by attributes;
Perform simple addition and subtraction within 100;
Measure and compare lengths, widths, heights, and capacities using appropriate tools;
Recognise and draw basic 2D shapes (triangles, rectangles, squares, circles);
Represent data using simple tallies and graphs, and interpret them.
(This is adapted from the syllabus tables.)

SCHEME OF WORK – MATHEMATICS (LEVEL ONE) – TERM ONE (8 WEEKS)

Class: Level One (Class 1–2)
Subject: Mathematics
Term: One
Duration: 8 Weeks
Weekly Lessons: 4 (or as allocated in your school)
General Objectives:
By the end of the term, learners should be able to:
Classify objects into sets;
Count, read and write numbers up to 50;
Perform simple addition and subtraction within 20;
Identify and compare lengths and sizes of objects;
Relate days of the week and daily events;
Recognise basic shapes and patterns.

WEEK-BY-WEEK SCHEME

WEEK 1
Topic: ***Sets and Objects***
Sub-topics:
Meaning of a set
Identifying objects around us
Specific Objectives:
Learners should be able to:
Identify objects in their environment.
Group objects into simple sets (e.g., cups, stones, pencils).
Teaching/Learning Activities:
Sorting real objects in class.
Matching objects with pictures.
Group work classification.
Teaching Aids:
Real objects, charts, pictures, flashcards.
Assessment:
Learners sort objects correctly; oral questions.

WEEK 2
Topic: ***Classifying Sets by Attributes***
Sub-topics:
Colour, shape, size
Simple Venn diagrams
Specific Objectives:
Learners should be able to:
Classify objects by two attributes (colour & size).
Represent sets using simple diagrams.
Teaching/Learning Activities:
Classroom treasure hunt (finding colours/shapes).
Drawing simple circles to show sets.
Teaching Aids:
Shapes cut-outs, coloured counters, charts.
Assessment:
Worksheet: learners group pictures according to attributes.

WEEK 3
Topic: ***Numbers 0 – 20***
Sub-topics:
Counting forward/backward
Reading & writing numbers
Matching numbers to quantities

Specific Objectives:
Learners should be able to:
Count numbers 0–20 correctly.
Write numbers in figures and words (0–20).
Relate numbers to objects.
Teaching/Learning Activities:
Counting songs.
Filling number charts.
Counting real objects.
Teaching Aids:
Number chart, counters, flashcards.
Assessment:
Number dictation; counting tasks.

WEEK 4
Topic: ***Addition within 20***
Sub-topics:
Meaning of addition
Addition with objects
Addition of single-digit numbers
Specific Objectives:
Learners should be able to:
Add using concrete objects.
Solve simple addition sums within 20.
Teaching/Learning Activities:
Using beans/sticks for addition.
Playing “add and count” games.
Teaching Aids:
Counters, number line, addition chart.
Assessment:
Class exercise: add numbers using drawings or objects.

WEEK 5
Topic: ***Subtraction within 20***
Sub-topics:
Meaning of subtraction
Taking away objects
Subtraction with number line
Specific Objectives:
Learners should be able to:
Subtract objects from a group.
Solve subtraction sums within 20.
Teaching/Learning Activities:
Demonstration with real objects.
Subtraction games (“take away”).

Teaching Aids:
Objects, number line, charts.
Assessment:
Subtraction worksheet; oral demonstration.

WEEK 6
Topic: ***Measurement: Length & Size***
Sub-topics:
Comparing lengths (long/short)
Comparing sizes (big/small)
Specific Objectives:
Learners should be able to:
Differentiate long and short objects.
Compare sizes of objects.
Teaching/Learning Activities:
Comparing classroom items (books, rulers).
Sorting objects by size/length.
Teaching Aids:
Real classroom objects, pictures, charts.
Assessment:
Learners sort items according to length/size.

WEEK 7
Topic: ***Time: Days of the Week***
Sub-topics:
Names of days
Events of each day
Specific Objectives:
Learners should be able to:
Recite the days of the week.
Match day names to activities/events.
Teaching/Learning Activities:
Singing “days of the week” song.
Creating a class schedule.
Teaching Aids:
Calendar chart, flashcards.
Assessment:
Oral recitation; matching exercises.

WEEK 8
Topic: ***Geometry: Basic Shapes***
Sub-topics:
Naming shapes (circle, square, triangle, rectangle)
Identifying shapes in the environment

Specific Objectives:
Learners should be able to:
Identify and name basic shapes.
Draw simple shapes.

Teaching/Learning Activities:
Shape-hunt around the school.
Shape-drawing on slates/books.
Teaching Aids:
Shapes cut-outs, charts, real objects.
Assessment:
Draw and name shapes.

REMEDIATION & ENRICHMENT (Throughout the Term)
Remediation:
Extra counting practice.
Pair work for slow learners.
More manipulative use (stones, bottle tops).
Enrichment:
Skip-counting by 2s and 5s.
Identifying shapes in complex patterns.
Simple problem-solving tasks with real objects.

WEEKLY RECORDS & ASSESSMENT
Continuous assessment using checklists.
Weekly exercises and oral tasks.
End-of-term test covering all topics.
